LinkedIn | GitHub | Portfolio

I am a 4th-year Software Engineering student at Sakarya University. My interest in mathematics and computer science led me toward software development. I enjoy problem-solving, and I take an approach that is open to learning and constantly improving myself. I'm also interested in design and create various designs using Canva.

TECHNOLOGIES I WORK WITH

Programming Languages: Java, C#, Dart, TypeScript, JavaScript, SQL, C++

Backend & Frameworks: Spring Boot, .NET Core, Next.js, React, Node.js, Fastify, Prisma ORM

Data Engineering: Apache Kafka, Apache Spark, Hadoop HDFS, Cassandra, Redis, PostgreSQL, MySQL

Tools & Technologies: Docker, AWS EC2, Git/GitHub, Nginx, Unity Engine

EXPERIENCE

Software and GIS Department Intern *July 2026*
SASKİ General Directorate — Sakarya, Turkey

IT Department Intern *August 2026*
Kıvanç Tekstil — Adana, Turkey

EDUCATION

Software Engineering (English), Bachelor's *2022 – Present*
Sakarya University — Sakarya, Turkey

High School Diploma *2017 – 2021*
Sungurbey Anadolu High School — Adana, Turkey

PROJECTS

Supplier Sustainability Assessment System (Internship Project)

React 19, TypeScript, Vite, Tailwind CSS 4, Next.js, PostgreSQL (Neon)

- Developed the interface of a corporate web application used to evaluate suppliers based on environmental and social responsibility criteria.
- Built a database-driven RBAC infrastructure based on a role–module permission matrix; closed unauthorized access and IDOR vulnerabilities through permission checks at the page, button, and API endpoint level.

Full-Stack Water and Billing Management System

Fastify, Prisma ORM, React, PostgreSQL, JavaScript, JWT

- Developed a comprehensive water/billing management system with a React-based interface, managing a PostgreSQL database through a backend service built with Fastify and Prisma ORM.

Cloud Native DevOps Pipeline

AWS, Docker, Nginx, Spring Boot, MySQL, Java

- Successfully deployed a Dockerized Spring Boot application to an AWS EC2 (Linux) environment.
- Configured Nginx as a reverse proxy to securely manage external traffic.
- Simulated an end-to-end CI/CD pipeline by managing images through Docker Hub.

Social Gaming App (In Development)

Flutter, Dart, Mobile Gaming, State Management

- Developing a mobile gaming platform featuring popular games such as Werewolf and Taboo, with complex voting mechanisms and a role-assignment system.

Personal Portfolio Website
Next.js 15, Tailwind v4, React, Framer Motion

- Built a fully responsive, performance-focused website using modern web technologies.
- Implemented smooth animations and glassmorphism designs with Framer Motion.

Unity 2D Game Project
Unity Engine, C#, 2D Physics, OOP

- A Unity project where I tested 2D physics-based mechanics, object interactions, and in-game interfaces.

LANGUAGES

Turkish: Native
English: B2 (Upper-Intermediate)
